

710 students -- here are some important deadlines for you to meet:

1. March 31 (or sooner) -- deadline to email me the names of the three faculty members that will serve as your 710 committee. The committee should consist of your 710 instructor and two additional CSCI faculty members. Make sure the people you choose agree to be on your committee. You may not complete the 710 without an approved committee.
2. Second week of April (or sooner) -- deadline to meet with your approved committee and give them your final work for your 710 project. Your committee will set any requirements they have for you. At a minimum this will include a completed research paper on the topic you submitted at the time of registration. Some committees may require a question and answer session with you or may require you to give a talk to them on your research project. If you have questions about their requirements, please speak with your 710 instructor.
3. April 22 (or sooner) -- deadline for you to email me the title of your 710 project so that the official grade sheet can be prepared.
4. April – Last Day of Classes (or sooner) -- deadline for your committee to sign the official grade sheet for the 710 project (original signatures only) and submit it to the OGSR. No scans will be accepted. If you miss this deadline, you will not graduate in May (assuming you were planning to graduate in May).
5. April – Last Day of Classes -- if you will not complete your 710 by the deadline for the semester -- please make sure your 710 instructor is well aware of this fact. You will need to negotiate the grade of "I" or an extension of an existing grade of "I" (only one extension is allowed by W&M) with your project director. Grades of "I" automatically change to grades of "F" at the end of the next regular academic semester.

Please let me know if you have any questions about the 710 process. If you need to know the Summer deadlines for 710, send me a private email.
